

Fahad Mapari

Mumbai, Maharashtra | thefahadmapari@gmail.com | +91 9769598609 | github.com/fahadmapari

Skills

Languages: JavaScript, TypeScript, HTML5, CSS, SQL

Frontend: React, Next.js, Tailwind CSS, shadcn/ui, TanStack Table, React Hook Form, Zod, SWR, Redux, GraphQL

Backend: Node.js, Express.js, MongoDB, Redis, WebSockets, REST & GraphQL APIs, JWT, Pinecone, RAG pipelines

Infrastructure & Tooling: Cloudflare Workers, Git, AWS S3, GitHub Actions, CI/CD, Nginx, PM2, Linux, Sentry

Experience

Frontend Engineer, Relative Technologies (C SQUAD LLP) – Remote, Hyderabad

Jan 2023 – Present

Contributed to frontend development across three production Web3 and DeFi platforms, **relative.fi** (P2P betting platform for crypto and real-world assets), **RFX** (DeFi trading platform built on Hyperliquid), and **Reflex** (AI-powered trading terminal with sentiment signals).

- Architected server-side rendering in a Web3 environment, resolving hydration mismatches between server-rendered markup and browser-only wallet state (MetaMask), thereby improving SEO indexability and initial load performance.
- Built core trading and betting interfaces from scratch, contributing to a launch that scaled to **\$25M in trading volume and 70K+ active users within 60 days**.
- Developed complex UIs, including real-time order books, live betting markets, AI-driven sentiment dashboards, and interactive charting, translating intricate product requirements into responsive, accessible interfaces.
- Integrated WebSocket connections to stream live market data, order updates, and odds changes, with reconnection handling and message batching to keep UIs smooth under high-frequency updates.
- Cut production incidents by **~90%** by instrumenting Sentry, triaging recurring error patterns, and shipping fixes upstream into shared components, materially improving stability and user trust.
- Mentored junior engineers and conducted code reviews, improving code quality, TypeScript adoption, and consistency in async/data-fetching patterns.

Projects

Full-Stack Travel Management Platform

[Admin](#) | [Backend](#) | [Frontend](#)

- Engineered a scalable backend using Node.js, TypeScript, MongoDB, Redis, and AWS S3, featuring real-time WebSocket communication.
- Implemented a RAG pipeline for natural-language product search, embedding product data with Gemini on upload, storing vectors in Pinecone, and answering user queries by retrieving top matches and grounding responses with Gemini Flash.
- Built a complex admin SPA with React and Vite for internal data management, and a high-performance public site with Next.js for optimal SEO and speed.
- Implemented end-to-end security with JWT and Arcjet, and fully automated the deployment process with a CI/CD pipeline using GitHub Actions.

Product Upload Tool - Chrome Extension

[GitHub](#)

- Built a Chrome Extension (Manifest V3) that automated product upload for a tour company, extracting tour data from Google Sheets and Docs via OAuth and auto-filling a complex Angular admin panel, handling Angular change detection, ng-select dropdowns, and Quill rich-text editor inputs.
- Wrote a resilient parser to extract structured data from non-uniform, unlabelled Google Docs, handling a wide range of edge cases and inconsistent formatting across thousands of documents.
- Backed the extension with a Cloudflare Worker for license key validation (24-hour caching) and shipped a Side Panel UI with code obfuscation for production delivery.
- Reduced product upload time by **~60%** for employees, replacing hours of repetitive manual data entry across the company's product catalog.

Education

Tilak Maharashtra Vidyapeeth – M.Sc. Computer Application

2022

Tilak Maharashtra Vidyapeeth – Bachelor of Computer Application
